

DESIGNING AND IMPLEMENTING AN INTERVENTION PROGRAM

that works

hello!

The idea of integrating intervention into your daily classroom can be daunting.

- How do you fit it in?
- What resources do you use?
- How do you manage behavior?
- How do you assess?

This course will take you through designing and implementing an intervention program in your class...
that works!

If you are interested in having help develop an intervention plan for your school, with an actual interventionist in charge, see the last page in this informational packet!

What's covered?

This course is broken down into four modules:

- **Math Intervention: The Basics** – In this module we will take a solid look at what math intervention is, and what it is not.
- **Designing Your Math Intervention Program** – This module focuses on the planning phase. We chat about materials, progress monitoring, leveling down, classroom management and more!
- **Making Time for Intervention** – This module helps you see exactly where intervention can fit in your weekly routine, while giving you a detailed suggested daily schedule for your regular classroom as well!
- **Implementing Intervention** – The final part walks you through the 8 Keys to a Successful Intervention Program.

Each module not only provides you with information, but you will also receive resources you can use right away through all phases of planning for and implementing an intervention program in your classroom!

Optional enrollment – You can enroll in just the course with the free resources OR enroll in the Zoom option that also includes four live Zoom calls are included – one call for each module. If you enroll in the Zoom option, you will get access to the recordings in case you miss one!

Pricing Information:

\$49

- Four module recordings
- \$35+ in downloads, including planning templates, two packets of ready to go intervention material.

\$99

- Four module recordings
- \$35+ in downloads, including planning templates, two packets of ready to go intervention material.
