## Pop Quiz 01

# 1

True or False: Every Penis is the same size

☐ True ☒ False

Each person's penis is different. During puberty, a penis will grow bigger and longer. This happens at different ages for different people. There's no need to worry about the size of a penis because all sizes are normal.

# 2

What is the scientific name for the "sac" that holds the testicles?

☐ Penis ☒ Scrotum ☐ Anus ☐ Bladder

The scrotum is the sac of skin that holds and protects the testicles (often called "balls"). The scrotum is located behind and underneath the penis. (PPFA)

# 3

True or False: Ejaculation is when the penis changes size and shape.

☐ True ☒ False

When the penis changes shape and size, and moves away from the body, it is called an erection. Erections happen when a person's body is sexually excited. But during puberty, it's common to get an erection for no reason at all. It's also normal to get an erection during the night (aka wet dream).

# 4

In what body part does a pregnancy grow?

☐ Stomach ☒ Uterus  
☐ Testicles ☐ Ovaries

The uterus is where a pregnancy grows (or develops). It's also called "womb."
