1. **What is a Trauma Frequency?**

An emotion can become stuck in the body because it was not processed correctly. Unprocessed emotions that become stuck in the body are called Trauma Frequencies.

2. **How is an emotion not processed correctly and how can they become stuck in the body?**
 - An emotion is processed correctly when a negative emotion is experienced but then ignored, suppressed, or not acknowledged. It then has the potential to become stuck in the body as a negative vibrational frequency.
 - Or, if you are exposed to the same negative emotion frequently, or for a prolonged period, it can also become stuck in the body.

Every emotion has its own unique frequency at which it vibrates. When an emotion becomes stuck in the body, it sits in a specific area of the body, vibrating at its own unique

frequency. This causes an energetic imbalance in that specific area, organ, gland or body part.

The energetic imbalances caused by these trauma frequencies are one of the most common reasons for negative symptoms, aches and pains that we experience in our bodies.

Only negative emotions become stuck in the body. These negative emotions are usually caused by mild or severe physical or emotional trauma, hence the name Trauma Frequency.

3. What are the different types of Trauma Frequencies?

- **Your Own Trauma Frequency:** This will be your personal traumatic events, emotions or feelings that were not processed correctly.
- **Bloodline Trauma Frequency:** A Trauma Frequency that was inherited, it gets downloaded as an energetic frequency at the moment of conception.
- **Absorbed Trauma Frequency:** This is an emotion, feeling or trauma that is absorbed from another person. In cases of abuse there might be emotions that are absorbed from the abuser by the victim. Or if you are close with someone, and they experience a trauma or an intense emotion, you can absorb it as a form of empathy.
- **Prenatal Trauma Frequency:** Can be the baby's own emotion that becomes stuck during the time in the womb. Or it can be absorbed from mom, or dad (usually mom), or even a twin, during the time in the womb.
- **Resonance:** A very intense trauma, emotion or feeling that resonates throughout the entire body at a specific frequency.
- **Barrier Trauma Frequency:** This is a Trauma Frequency that the subconscious mind created to form a barrier of protection around a person's heart and feelings. This is to protect the person against a potential threat, from more hurt, harm or betrayal. This can lead to depression, anxiety, difficulty to give and receive love, and have an impact on your intimacy with God.

- **Psychological Trauma:** This is linked to a traumatic physical or emotional shock, instead of experiencing one emotion after the other, two or three emotions are experience simultaneously, and becomes trapped as a unique Trauma Frequency in the body.

Your subconscious mind used the negative emotions or Trauma Frequencies that became trapped to form a barrier of protection around a person's heart and feelings. This is to protect the person against a potential treat, from more hurt, harm or betrayal. This can lead to depression, anxiety, difficulty to give and receive love, and have an impact on your intimacy with God.
